Looking for frontend developer to be part of the Scaleflex startup adventure

We build tools

Building a modern web or mobile application is time consuming. Whether you are a developer or a product manager, you need to go through feature requests, specifications writing, technical choices, development, testing, user acceptance testing, some more development, some more testing… It has no end. It can be sometimes frustrating, especially when two third of the features in you app are the same than in any other app:

- you need a landing page to sell your product or services,
- you probably need an authentication framework with login/password,
- you need transactional emailing to communicate proactively with your users,
- you need image optimisation to accelerate your app loading time,
- you need application monitoring to make sure your site still runs after an earthquake,
- you need storage, …

Sounds familiar? Yes, these "features" are the common building blocks of most modern apps today. Oh, and you still need to build value for your customers, right?
This is where Scaleflex can help. Our supereasy-to-use API toolkit allows product managers and developers to focus on what really matters to their customers: the **value** added by their application.

Need to create multiple versions of your images for your eCommerce shop? Simply copy-paste few URLs!
Need to send transactional emails to your users? Design your email in a pretty editor and send it via an API in 2 lines of code!
Need to store images and content and offer them for download? Use a super scalable storage infrastructure and a fancy file manager to interact with it.
Need to distribute your content via a Content Delivery Network? Again, simply copy-paste few URLs!

I think you got it! Scaleflex is the first all-in-one toolbox for developers to save time and start focusing on building value and not tools. We want to be for developers what plumbing, electricity, doors and windows are to a building: a common building block.

We are a rapidly expanding French / Bulgarian Start-Up with offices in Paris, Munich and very soon Sofia. After launching our first product, https://cloudimage.io, in 2015, we are expanding the toolkit with additional tools:

You mission, should you accept it

We are looking for a developer with product management experience to join our team and work from our Sofia office. You will be responsible for mainly creating and extending the landing pages and the admin portals of the new services we are planing to launch in 2017. We are looking for a HTML5, CSS3, Javascript guru with 3 years+ of experience working as fronted developer within a R&D organisation with following skills:

Programming languages
- HTML5, CSS3
- Javascript (jQuery), Ajax

Technologies
- AngularJS (any version)
- Ajax calls to REST APIs
- NodeJS (not necessary, but some experience is appreciated)
- CSS Bootstrap
- Frontend package managers: Gulp, Bower, …

Development frameworks
- Silex
- Git, JIRA

Others
- Proficient in English, spoken and written
- Autonomy and initiative-taker
- Some sort of creativity in order to build beautiful / modern websites. You don't need to be a designer but a little bit of taste is required :)
- Bachelor's or MAster's degree in computer engineering / science

You should be able to show that you work with passion and commitment, enjoy what you are doing and most importantly be able to take initiatives. Constantly

staying up-to-date with the newest development frameworks and being able to learn quickly new ways of doing things will be key to your (and our!) success. You should be excited to join a dynamic startup team which offers a lot of room for growth.

We would love to see what you have worked on and achieved in the past, so feel free to submit your portfolio with your application.

Our Team

Our 3 co-founders have years of experience in the startup and corporate worlds within companies like AirWatch, VMware, Apple and multiple startups in Europe and the US. We work with passion in order to execute with commitment for our customers. Our vision is to build the "AWS of dev tools" and become a World leader in the "Business to Developer" segment. With presence in the United Kingdom, France, Germany, South Korea and Bulgaria, we offer options for working out of different locations. We love building stuff that works and is useful for our customers. We believe that people only use a small fraction of the features they pay for when subscribing for cloud-based tools, so we focus on building the 5% of the features required by 95% of the customers.

The Rewards
- Competitive salary and equity
- Work in a flexible environment with flexible work hours and lot of independence
- Regular travel to our European locations if desired
